Accordingly, ~~the technical problem to be solved by the subject matter~~ one object of the present invention is to provide that of providing, in an intraframe video coding process that calculates virtual blocks associated with a current image block in given prediction directions, a method of finding the prediction direction of the current image block that reduces the calculation time needed to find the best prediction direction, i.e. the prediction direction that yields the virtual block closest to the current block.

On page 3, amend the paragraph beginning on line 8 through line 10 as follows:

~~According to One aspect of the present invention is directed to a , the solution to the stated technical problem consists in said~~ method comprising the following steps:

On page 4, amend the paragraph beginning on line 33 as follows:

Finally, an embodiment of the invention also provides for said initial prediction directions to be vertical and horizontal directions as defined in the H.264/MPEG-4 AVC standard. These directions are those whose interpolations relative to the other diagonal directions are the simplest to calculate.
